

蚊取り線香 ▶ mosquito coil

Mosquito coils are incense sticks that have been mixed with ingredients with an insecticidal effect. When they were first developed in Japan at the end of the nineteenth century they were stick-shaped, but they were later refined into spiral coils.

蚊取り線香は、殺虫効果がある成分を練り込んだ線香です。日本で19世紀の終わりに開発された時は棒状でしたが、後に渦巻き型に改良されました。

【豆知識】pyrethrum coil とも言います。
